

Parts List

The part below is in this package.

Height Booster	
	1pc

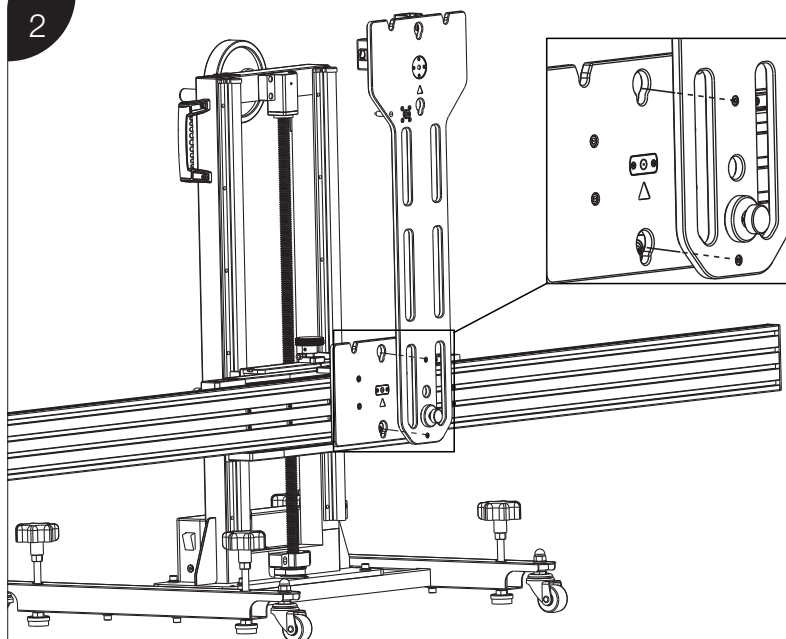

Assemble the Height Booster

1

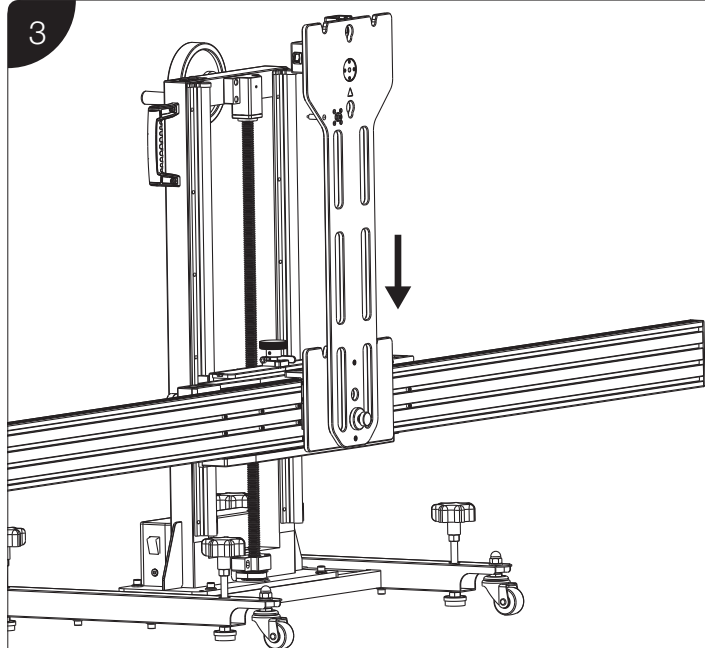

Loosen the locking knob counterclockwise so that its head does not exceed the surface of the height booster.

2

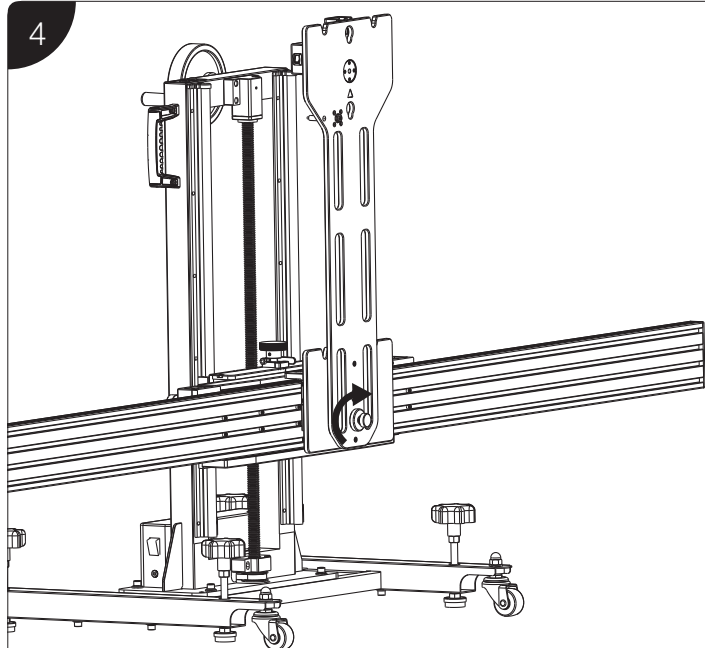

Align the two T-shape hooks on the height booster with the two large round holes on the sliding plate.

3

Put the T-shape hooks screws into the two large round holes, and then let the hooks slide down naturally, thereby hanging the height booster on the sliding plate.

4

Tighten the locking knob clockwise. The Height Booster assembly is now complete.
